

Payal's Kitchen

A delicious journey into food delivery solutions

Project Definition Description

Payal's Kitchen is an online food service platform designed to provide customized **Tiffin services** and **event meal ordering**. The system introduces a flexible **subscription-based** model with plans such as Basic, Premium, and Exotic, each offering unique daily menus. Subscriptions are available on monthly, quarterly, and yearly bases to cater to various customer needs. The menu under each plan is refreshed daily, ensuring variety and freshness. Apart from regular tiffin services, Customers can also place **custom orders** without a subscription. A dedicated module for event ordering allows bulk meal planning for special occasions. The platform simplifies meal management through an intuitive online ordering.

Company description

- **Company:** Payal's Kitchen
- **Owner :** Payal Bhatt
- **Overview:** Payal's Kitchen is a home-based tiffin service offering fresh, hygienic, and home-style meals. It provides daily lunch and dinner, event orders, and customizable menus. Timely delivery and quality are a priority. Weekly and monthly subscriptions are also available.
- **Contact:** 8780118707
- **Address:** A-47 Nigam Society, Ghodasar, Ahmedabad

Abstract

- The Tiffin and Event Catering Management System is designed to simplify and automate daily meal subscriptions and event catering services.
- It enables customers to select subscription plans or event packages, customize their orders, and make secure online payments.
- Administrators can efficiently manage products, categories, offers, and monitor customer activities from a centralized dashboard.
- Employees can track their assigned tasks with ease.
- Overall, this system enhances efficiency, transparency, and customer satisfaction in food delivery and event catering operations.

Objectives

- To develop a centralized system that manages daily tiffin services and event catering efficiently.
- To enable customers to browse, subscribe, and place orders easily through an online interface.
- To allow admins to handle packages, menus, and employee tasks seamlessly.
- To maintain accurate records of payments, feedback, and event bookings.
- To minimize manual effort and improve service speed, reliability, and customer satisfaction.

EXISTING SYSTEM

- Customers order food manually via phone calls or WhatsApp.
- No subscription system
- Menus are fixed or sent daily over messages – no real-time updates.
- No support for one-day or event-specific custom orders.
- No digital payment facility.
- Difficult to manage multiple customers, payments, and preferences.
- Admins handle everything manually – menu planning, order count, customer data.

PROPOSED SYSTEM

- Web-based platform for easy meal ordering and subscription.
- Multiple subscription plans (Basic, Premium, Exotic) with daily refreshed menus.
- Support for custom one-day orders and event orders.
- Customer dashboard to manage orders, payments, and subscriptions.
- Admin panel for managing menu, orders, Customers, and generating reports.
- Real-time order management and automated reminders.
- Integration of online payments and email invoice generation.
- Improved accuracy, speed, and customer satisfaction

Tools & Technology

Frontend

- HTML5
- CSS3
- JavaScript (Es7)
- React.js (18.2)
- Node.js (22.14)
- TailwindCSS (4.0)

Backend

- Mongo DB

Web Server

- Express JS (5.1)

Reporting Tool

- Rechart (3.1.0)

Other Tools

- Canva

Brief Introduction of Modules

1. Authentication

This module enables customers to register and log in safely. It verifies the credentials of both customers and employees prior to granting access. Additionally, it supports role-based access for staff and customers while ensuring data security through password encryption.

2. Customer Management

Stores and manages customer personal and contact details. Tracks customer orders, activities. Customer can purchase Subscription or custom ordering.

Helps deliver personalized and efficient service.

3. Daily Menu & Custom Order

Customers will receive the Daily Menu displayed on their screens, which the admin will update each day. This feature enables customers to order a Tiffin based on that day's menu.

Brief Introduction of Modules

4. Employee Management

Maintains records of employee details and . Tracks attendance, and assigned tasks. Admin can add, update, or remove employee data. Admin can schedule the employee to finish or deliver the tiffin or orders.

5. Offers & Discount Plans

Enables admin to create and manage various offers. Supports time-based or seasonal discount schemes. Attracts new customers and retains existing ones. Boosts customer engagement and sales.

6. Subscription Plans

Manages different subscription types like monthly/yearly. Allows Customers to select, renew, or cancel plans. Tracks subscription status and renewal status. Improves recurring revenue and Customer convenience.

Brief Introduction of Modules

7. Event Ordering

Customers can place orders for events or multiple events at a special price by choosing from five attractive package options. These packages offer various choices, and orders can be made even for large gatherings.

8. Feedback

Collects feedback and ratings from customers. Helps identify service issues and improvements. Stores the feedback on which the admin takes appropriate actions.

9. Notification

The user will get notified when he purchase subscription or books a custom order or Event orders, they'll be notified on the signup and registration

Feasibility Study

- The system is **Technically feasible**, using reliable technologies such as MongoDB, Node.js, React, and Tailwind CSS.
- It is **Economically feasible**, requiring minimal setup and maintenance cost for small to medium-scale businesses.
- The **Operational feasibility** is strong, as the system ensures smooth coordination between customers, administrators, and employees.
- It is also **Legally feasible**, adhering to data security and privacy standards.

Therefore, the project is practical, cost-effective, and scalable for real-world catering and tiffin management applications.

Conclusion

- The Tiffin and Event Catering Management System successfully digitalizes traditional meal and event service operations.
- It reduces manual effort, enhances order accuracy, and improves customer convenience.
- With centralized management for customers, employees, and admins, it ensures smoother workflows.
- The system is scalable, user-friendly, and adaptable to different business models.
- Overall, it provides a reliable, efficient, and modern solution for the food delivery and event catering industry.

Future Scope

- The system can be enhanced with AI-based meal recommendations based on user preferences and order history.
- A mobile application can be developed for easier access and real-time delivery tracking
- Automated billing and analytics dashboards can help admins monitor sales trends efficiently.
- Integration with third-party delivery APIs can improve delivery speed and coverage.
- Future updates may also include multi-branch management and voice-based order placement.
